

## *Kneadable sealing putty*

The pool fermit sealing putty is a chlorine and salt water resistant sealing compound for sealing skimmers or floor drains. Prevents the formation of condensation water on headlights and contact corrosion, for example in the cable junction box.

- Unlimited shelf life
- High elasticity
- High adhesive power
- Residue-free processing
- Temperature resistant up to 100° C

### Application

With clean hands, put the "dough" into the desired shape modelling. The objects to be sealed should be free of dirt or solid residues. Not on objects from marble or other natural stone! Does not seal at pressure.

### Durability and storage:

Unlimited shelf life when stored in dry and dark conditions at normal air humidity and room temperature

The information contained on the technical datasheet is provided in all good faith and results from measurements made in our laboratory. Given the number of materials, differences in quality and diversity of working methods, we recommend that users perform tests prior to application under actual conditions of use. This document may be amended in keeping with product development and the state of our knowledge without prior notice and therefore it is recommended to check that you have the latest version before use. The safety data sheet is available online at [www.fermit.com](http://www.fermit.com)
